Preface ix
Acknowledgments xiii
Acronyms and abbreviations xiv

1	Introduction	1	
	1.1 A new synthesis	1	
	1.2 The Golden Age, resolution, revolution and paradox: an up-to-date empirical tour of atmospheric variability	4	
	1.3 The phenomenological fallacy	18	
2	Classical turbulence, modern evidence	21	
	2.1 Complexity or simplicity? Richardson's dreams and the emergence of the laws of turbulence	21	
	2.2 The equations of the atmosphere and their scale symmetries	25	
	2.3 Extensions to passive scalars, to the atmospheric primitive equations	28	
	2.4 Classical isotropic 3D turbulence phenomenology: Kolmogorov turbulence and energy cascades	31	
	2.5 The special case of 2D turbulence	36	
	2.6 Atmospheric extensions	37	
	2.7 Summary of emergent laws in Chapter 2	51	
	Appendix 2A: Spectral analysis in arbitrary dimensions	53	
	Appendix 2B: Cascade phenomenology and spectral analysis	55	
	Appendix 2C: Spectral transfers	58	
3	Scale-by-scale simplicity: an introduction to multiplicative cascades	59	
	3.1 Cascades as conceptual models	59	
	3.2 Discrete-in-scale multiplicative cascades	61	
	3.3 Universal multifractal processes	76	
	3.4 Summary of emergent laws in Chapter 3	81	
	Appendix 3A: The convexity of $K(q)$	82	
4	Empirical analysis of cascades in the horizontal	83	
	4.1 The empirical estimation of turbulent fluxes in both dissipation and scaling ranges	83	
	4.2 The scaling properties of reanalyses	86	
	4.3 The cascade structure of in-situ aircraft measurements: wind, temperature and humidity fields	96	
	4.4 The cascade structure of precipitation	100	
	4.5 The scaling of atmospheric forcings and boundary conditions	106	
	4.6 Summary of emergent laws in Chapter 4	109	
	Appendix 4A: Trace moments of quasi-Gaussian processes	111	
5	Cascades, dimensions and codimensions	113	
	5.1 Multifractals and the codimension function	113	
	5.2 The codimension multifractal formalism	115	
	5.3 Divergence of statistical moments and extremes	125	
	5.4 Continuous-in-scale multifractal modelling	141	
	5.5 Wavelets and fluctuations: structure functions and other data analysis techniques	150	
	5.6 Summary of emergent laws in Chapter 5	162	

Contents

- Appendix 5A: Divergence of high-order statistical moments 165
- Appendix 5B: Continuous-in-scale cascades: the autocorrelation and finite size effects 167
- Appendix 5C: A Mathematica code for causal and acausal multifractal simulations 172
- Appendix 5D: Multifractal simulations on a sphere 174
- Appendix 5E: Tendency, poor man's and Haar structure functions and the MF DFA technique 175
- 6 Vertical stratification and anisotropic scaling 183
- 6.1 Models of vertical stratification: local, trivial and scaling anisotropy 183
- 6.2 The Brunt-Väisälä frequency and the classical stable layer approach to stratification 197
- 6.3 The implications of anisotropic scaling for aircraft turbulence measurements 201
- 6.4 Horizontal and vertical analyses of dynamic and thermodynamic variables 204
- 6.5 Direct verification of anisotropic cascades using lidar backscatter of aerosols and CloudSat radar reflectivities 211
- 6.6 Zonal/meridional anisotropy in reanalyses 217
- 6.7 Summary of emergent laws in Chapter 6 223
- Appendix 6A: Revisiting the revised EOLE experiment: the effect of temporal averaging 225
- Appendix 6B: Cross-spectral analysis between wind, altitude and pressure 227
- 7 Generalized scale invariance and cloud morphology 229
- 7.1 Beyond self-similarity and self-affinity 229
- 7.2 GSI data analysis 255
- 7.3 Spatially varying anisotropies, morphologies: some elements of nonlinear GSI 262
- 7.4 Summary of emergent laws in Chapter 7 269
- Appendix 7A: The normalization constant in anisotropic continuous-in-scale multifractal simulations 271
- 8 Space-time cascades and the emergent laws of the weather 274
- 8.1 Basic considerations and empirical evidence 274
- 8.2 Anisotropic space-time turbulence 300
- 8.3 Global space-time scaling in Fourier space 304
- 8.4 Space-time relations 308
- 8.5 Summary of emergent laws in Chapter 8 312
- Appendix 8A: The effect of the vertical wind on the temporal statistics 313
- 9 Causal space-time cascades: the emergent laws of waves, and predictability and forecasting 314
- 9.1 Causality 314
- 9.2 The emergent laws of turbulence-generated waves 318
- 9.3 Predictability/forecasting 329
- 9.4 Summary of emergent laws in Chapter 9 335
- 10 The emergent laws of macro weather and the transition to the climate 337
- 10.1 What is the climate? 337
- 10.2 Macro weather: its temporal variability, and outer-limit τ_c 350
- 10.3 Spatial variability in macroweather and climatic zones 356
- 10.4 Summary of emergent laws in Chapter 10 363
- Appendix 10A: The dimensional transition asymptotic scaling of cascades in the macro weather regime 366

Appendix 10B: Stochastic linear forcing paradigm versus the fractionally integrated flux model	371	11.3 Climate forcings and global climate models	411
Appendix 10C: A comparison of monthly surface temperature series	374	11.4 The atmosphere in a nutshell: a summary of emergent laws in Chapter 11	424
Appendix 10D: Coupled ocean–atmosphere modelling	378		
11 The climate	383	<i>References</i>	427
11.1 Multidecadal to multimillennial scaling: instruments and multiproxies	383	<i>Index</i>	454
11.2 Scaling up to 100 kyr: a composite overall scaling picture of atmospheric variability	396	<i>Colour plate section appears between pages 483 and 498</i>
